🪪 PROFILE

I am a self-motivated, result-driven developer who prioritizes the effectiveness, usability, and optimized performance of applications. Disciplined and organized with a tendency to code with a modular structure to increase the reusability and scalability of functional components. I am a recent graduate student with enthusiasm to learn, grow and improve my career prospects as a System Developer.

- Helping clients with how to use web applications maintaining and supporting clients' Web applications.

Stack
- PHP
- IndexedDB
- JavaScript
- HTML
- CSS
- MySQL

🧠 SKILLS

- MySQL
- PHP
- Python

- HTML 5
- MsOffice
- C#

- jQuery
- React Js
- Git&GitHub

- JavaScript
- MongoDB

📂 PROJECTS

Jun 2020

Bluetooth chat application
Mid-Year project
- For my mid-year project I successfully built a Bluethooth chat using Java(Android).

May 2021	**Facial recognition attendance system** ⬈
	Final Year Project
	• For my final year I successfully implemented a facial recognition application which can be used to verify students' attendance.
	• The project was built using Python, PyQt5 and SQLite databases.
Mar 2022	**RoboFriends**
	• This is a React.js framework application utilizing a few outside APIs to create a stateful web application. Utilizing the APIs from JSONPlaceholder for user information and RoboHash for user images. Style for the page makes use of the Tachyons framework.
May 2022	**FaceRecognition Brain**
	React App
	• This is a React-based facial recognition app. It has a log-in and register form. It takes in an input URL of a person and detects the face by putting a box around the face.
